NATURAL SPACES DOMES STAFF IN FRONT OF OUR 36 DIAM. OFFICE DOME

SPACE SHIP EARTH HAS LIMITED  
RESOURCES. OUR FUTURE DEPENDS ON  
WHAT WE DO WITH WHAT WE HAVE LEFT.

The philosophy of natural spaces domes is to encourage people to stop building resource depleting houses, whose designs are based on the last 100 years.

Instead, we want people to start building an inspiring, personal living environment, designed for the next 100 years. A century in which intelligent, innovative housing decisions, like our natural spaces domes, will provide a benefit for the earth and its inhabitants.

Buckminster "Bucky" Fuller has to be given credit for the early development and promotion of the Geodesic Dome, starting in the 40's. His design team created spectacular, huge Dome enclosures for many uses. He was a prolific inventor, teacher and consummate lecturer until his death in July 1983. It was a pleasure and honor to have met him.

As, owner of Natural Spaces Domes, I have been personally involved and committed to the advancement of Dome homes since

1971.

I have come from generations of builders and crafters. My house designing goes back to 7th grade, a long, long time ago (1955).

My background includes 11 years as an architectural designer and project manager for Gingold-Pink Architects, working in Los Angeles and Minneapolis.

Then in 1972, along with my late wife Janet, I founded the Big Outdoors People, a Dome company that created over 350 Domes in 6 years. In 1978, they formed Natural Spaces Domes, completely revamping the Dome system. They eliminated problems, incorporated new, updated technology and patented a simple, strong, easy to use Dome building system.

Natural Spaces Domes are easy to build, personally designed, healthy, resource efficient and fantastically energy conserving. Read on and learn.
